

Sustainability Policy

6. Sustainability Policy

"Sustainable development meets the needs of the present without compromising the ability of future generations to meet their own needs". This is how the "Brundtland Commission", the United Nations World Commission on Environment and Development, defined back in 1987 what we should all be committed to.

For GOLDBECK SOLAR, sustainability is more. It ensures a balance between economic growth, environmental protection and social protection. It is the most important issue for our planet, the future of mankind and the stability of our economy. In all our decisions, products, services and undertakings, we strive to contribute to sustainable development, promote the responsible use of resources, protect the regional environment and preserve biodiversity.

6.1 Concrete measures

1. We actively promote the use of clean photovoltaic energy solutions and efficient energy use in all the markets we serve, thus helping to reduce CO2 emissions.

2. As part of the supply chain, we promote activities to solve environmental problems. We are committed to ensuring that all our stakeholders promote environmental protection and minimise logistical processes in our sales, purchasing and contractual processes.

3. We comply with the environmental regulations

of the individual countries and regions with which we cooperate.

4. We raise our employees' awareness of environmental issues and motivate them to deal with environmental protection through training and education. Internally, we promote sustainable mobility for our employees and reduce the use of plastics.

5. We continuously develop our products with a view to the efficient use of natural resources.

6. We optimise our internal processes and technologies to minimise and recycle the waste generated by our daily business activities.

7. We are determined to provide safe and healthy jobs and ensure that our employees are trained for all safety equipment with which they come into contact.

8. Overall, we are committed to continuously reviewing and improving the progress of our environmental performance. To this end, GOLDBECK SOLAR has set itself concrete targets and processes.
